

Release Notes

RCS – Remote Court Scheduling System

Release 4.25

Sunday June 16, 2019

RCS – Update wording/display for file marked as being dealt with by Specialized Prosecutions – SR 152570

- Currently if a file in PRISM is marked with a Specialized Prosecution Flag then RCS displays this information as “Special”, it will now display it as “Specialized Prosecution” instead, this is to keep the wording for this flag consistent throughout the different programs used by the Courts and the ACPS.

RCS – Fix for Error that Occurs in the Earlier Dates Available section of the Booking Summary and Booking Confirmation – SR 159587

- Some RCS Booking Summaries and Confirmations are displaying in the Earlier Dates Available Section: **0001-Jan 01, 01, 01, 01, 01, 01, 01**, instead of the actual earlier dates that were available in RCS and not selected. This is an issue that can be affected depending on what Internet Browser Settings or which Internet Browser the RCS user is using (for example: Internet Explorer vs. Google Chrome) and a fix has been put into RCS so this will not happen no matter what Internet Browser is used or what the users Internet Browser settings are.
